

Suspicious Message Checklist

Before you reply, click, or download anything

1

Stop

Do not reply yet. A message can wait while you check it.

2

Check the sender

Look closely at the full email address, phone number, and spelling.

3

Do not use the link

Open the company's official app or type its known website yourself.

4

Question the request

Be cautious if the message asks for money, passwords, codes, or personal details.

5

Ask another person

Show the message to someone you trust before taking action.

Unexpected urgency is a reason to slow down, not speed up.
